Second Questionnaire Mailing Categories

Blanketed second questionnaire mailing is planned for households in mailout/mailback areas with historically low response rates. All households in this category will receive a second questionnaire.

Targeted second questionnaire mailing is planned for households in mailout/mailback areas with historically mid-range response rates. In this category, households will only receive a second questionnaire if they did not return the first questionnaire.

Households in mailout/mailback areas with historically high response rates or households in areas where the census questionnaire was delivered by census workers and not by mail (non-mailout/mailback) do not receive a second questionnaire.
